

Delivering the Capstone Stakeholder Presentation

Your definitive guide to convincing stakeholders that your infrastructure is both **reliable** and **valuable** — balancing technical credibility with business clarity to achieve approval, recognition, and graduation.

Why a Stakeholder Presentation Matters

You can have **perfect infrastructure**, but if stakeholders don't "see it," it doesn't exist.

Audience Diversity

CTOs, SREs, ML engineers, product managers all have different perspectives and priorities

Dual Requirements

Executive clarity (ROI, uptime, scalability) + **technical proof** (SLOs, HA, drift detection)

Structure of Your Presentation

15-20 minute framework for maximum impact

1

Intro & Context

The problem your infrastructure solves

2

Architecture Overview

Simple, clear diagram of your solution

3

Demo / Walkthrough

Live or recorded proof of functionality

4

Results & Benchmarks

Key metrics and dashboard highlights

5

Business Value

Cost savings, resilience, future growth potential

6

Closing & Q&A

Risks, roadmap, and key takeaways

Opening Hook: Context Is Everything

"Modern AI systems fail without strong infrastructure."

Business Problem:

- Excessive latency affecting user experience
- Model drift leading to degraded predictions
- Unsustainable infrastructure costs
- Unplanned downtime impacting reliability

Capstone Goal:

Deliver infrastructure that meets strict SLOs while staying within budget constraints

One-Line Summary: "We built a resilient, scalable, cost-efficient AI infrastructure for [NLP/Vision/GenAI] that maintains p95 < 300ms and 99.9% uptime."

Architecture Overview

The story: data → model → API → dashboards

Demo: Show, Don't Tell

Live Demonstration

1. Call `/predict` → JSON response with model + latency
2. View Grafana dashboard reacting in real-time
3. Kill pod → observe service staying alive (failover)

📌 **Narration Tip:** "Notice how latency stays stable during failover — this guarantees uninterrupted fraud detection."

Always describe the **business impact** of what stakeholders see

Results & Benchmarks: The Evidence

Key Performance Indicators

- **p95 latency:** 270ms @ 200 RPS
- **Error rate:** 0.02%
- **GPU utilization:** 65%
- **Cost per request:** \$0.07 / 1k requests
- **Drift monitoring:** PSI < 0.25 sustained
- **Uptime:** 99.9% (4 minutes downtime/month)

Business Value: Beyond the Metrics

Resilience

99.9% uptime means:

- Fewer SLA penalties
- Improved customer trust
- Predictable system behavior

Cost Efficiency

GPU utilization ↑ 40% means:

- \$10K/month cost savings
- Faster ROI on hardware
- Lower TCO overall

Compliance

Drift monitoring means:

- Early detection of issues
- Regulatory compliance
- Reduced risk exposure

ROI Snapshot: Enhanced resilience + Significant cost savings + Regulatory compliance

Risks & Mitigations: Thinking Ahead

Vendor Lock-in

Mitigation: Hybrid cloud architecture with portable containers and abstracted APIs

Model Extraction Attacks

Mitigation: IAM with strict role-based access and API query rate limiting

Retrain Cost Spikes

Mitigation: Incremental checkpoints and automated budget guardrails

Future Roadmap: Where We're Headed

Closing: Mission Accomplished

"We set out to deliver reliable, scalable AI infrastructure — and we proved it."

<300...

p95 Latency

Even under peak load

99.9%

Uptime

Ensuring continuous service

100%

utilization

Thank you to all stakeholders for your support and guidance.

Questions?

Presentation Delivery Tips

Time Management

15-20 minutes, leaving 5 minutes for Q&A

Visual Strategy

Fewer words, more diagrams and metrics

Narration Focus

Speak to **business impact**, not just technical details

Preparation

Rehearse failover demo 2-3 times beforehand

Contingency Plan

Always have backup slides/screenshots ready

Example Visual Flow

An effective sequence for your gamma.app presentation

Capstone Presentation Checklist

Intro Slide

Problem statement and goal clearly defined

Architecture Diagram

Day 360 overview with 5-7 labeled components

Live Demo

API call + Grafana panel + failover demonstration

Benchmarks

Tables and charts showing before/after improvements

Business ROI

Metrics translated into business outcomes

Risk Assessment

Key risks and mitigation strategies outlined

Backup Materials

Screenshots prepared in case of demo issues

Rehearsal

Complete dry run with timing and transitions

Discussion: What Impresses Stakeholders Most?

"In your Capstone, which will impress stakeholders more: **resilience under failure** (failover demo) or **cost savings proof** (ROI slide)? Why?"

Consider how different stakeholders might value:

- Immediate business impact vs. long-term reliability
- Technical elegance vs. financial efficiency
- Risk mitigation vs. resource optimization
